PREVENT FOREST FIRES

Safety in Camping

1. Before building a fire, select a site near water, then scrape away all inflammable material from a spot 5 feet in diameter, being sure to reach mineral soil. Dig a hole in the center, and in it build your fire. Keep it small. Never build a fire against a tree or log, near brush, in rotten wood, or in duff—sparks may smolder after you have left.
2. Dead and down trees may be used for fuel.
3. Never break camp until your fire is out—DEAD OUT.
4. Stir coals while soaking them with water to put out a campfire. Turn small sticks and drench all sides. Wet the ground around the fire. If water is not available, stir in mineral soil and tread it down until packed tight over and around the fire. Be sure the last spark is dead.
5. Do not throw away lighted matches, cigar or cigarette ends, or pipe heels. Drop them in damp mineral soil—STEP ON THEM!
6. Leave a clean camp. Bury refuse or burn it in the campfire.
